

GIKeyMan

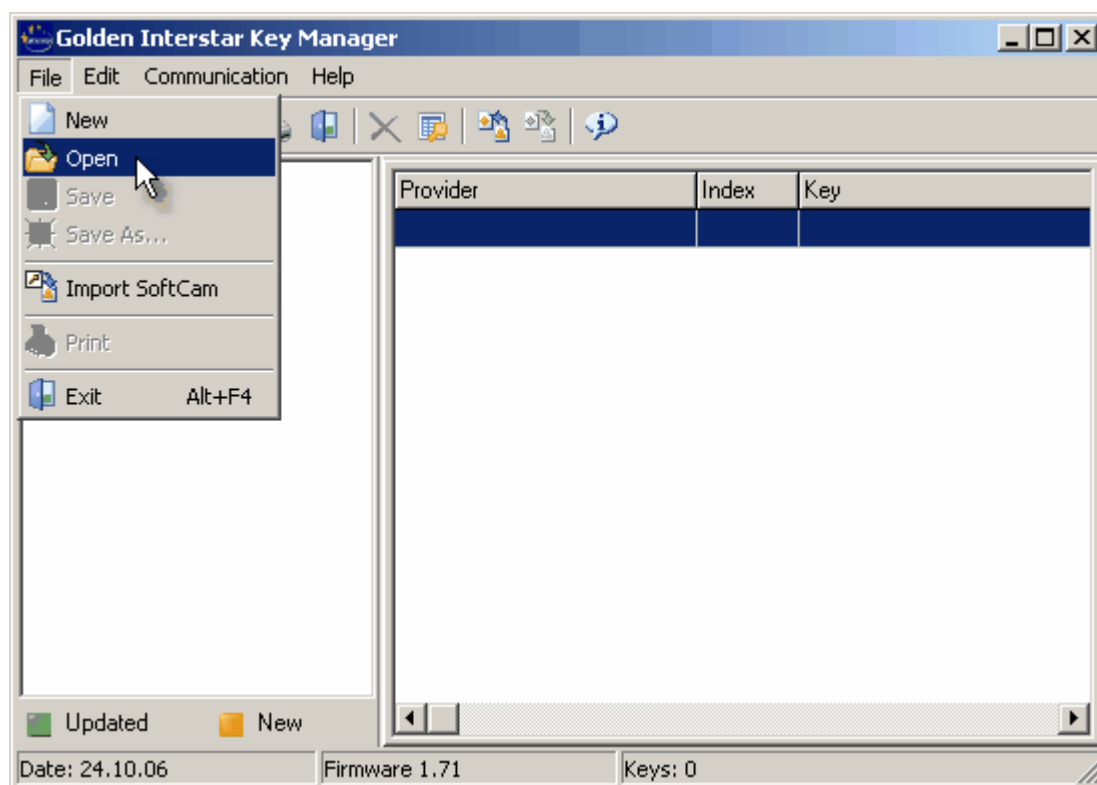

Main purpose of this program is help user to edit Key files for STB Golden Interstar.
You may: Open key file which is uploaded from STB by program STBDownloader or use integrated downloader (Only for testing. Functionality isn't guaranteed).

All program functions are accessible by a menu and toolbar.

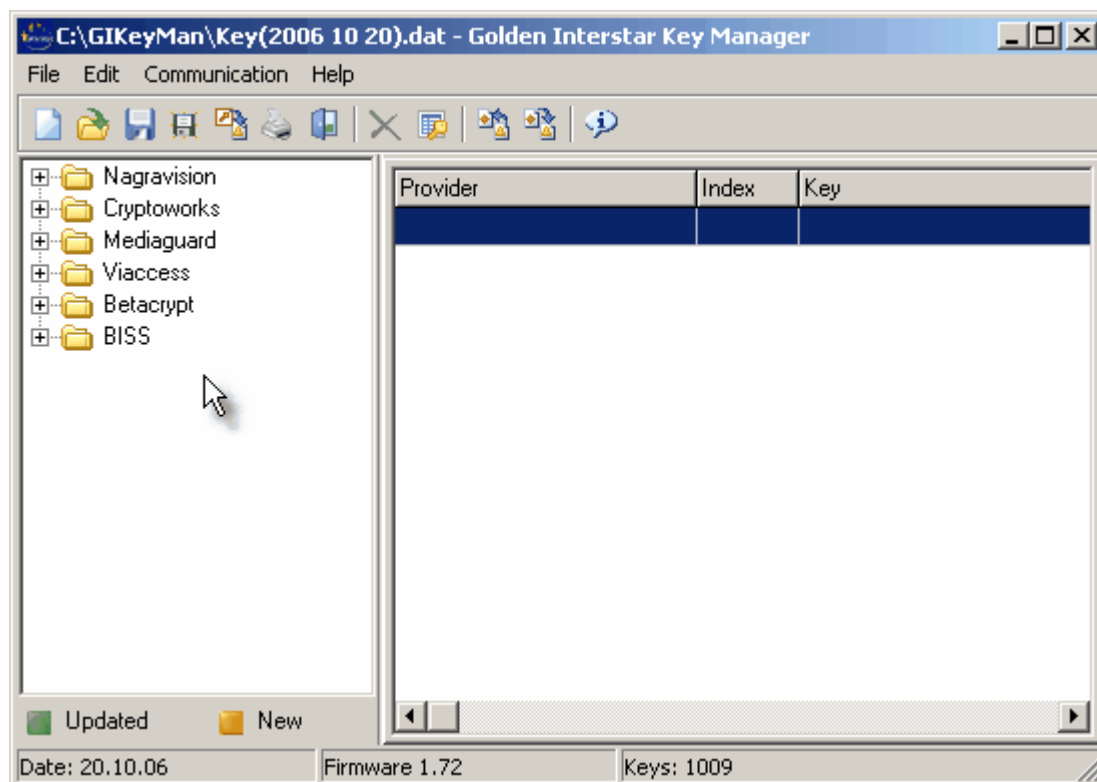

To open key file use icon Open:

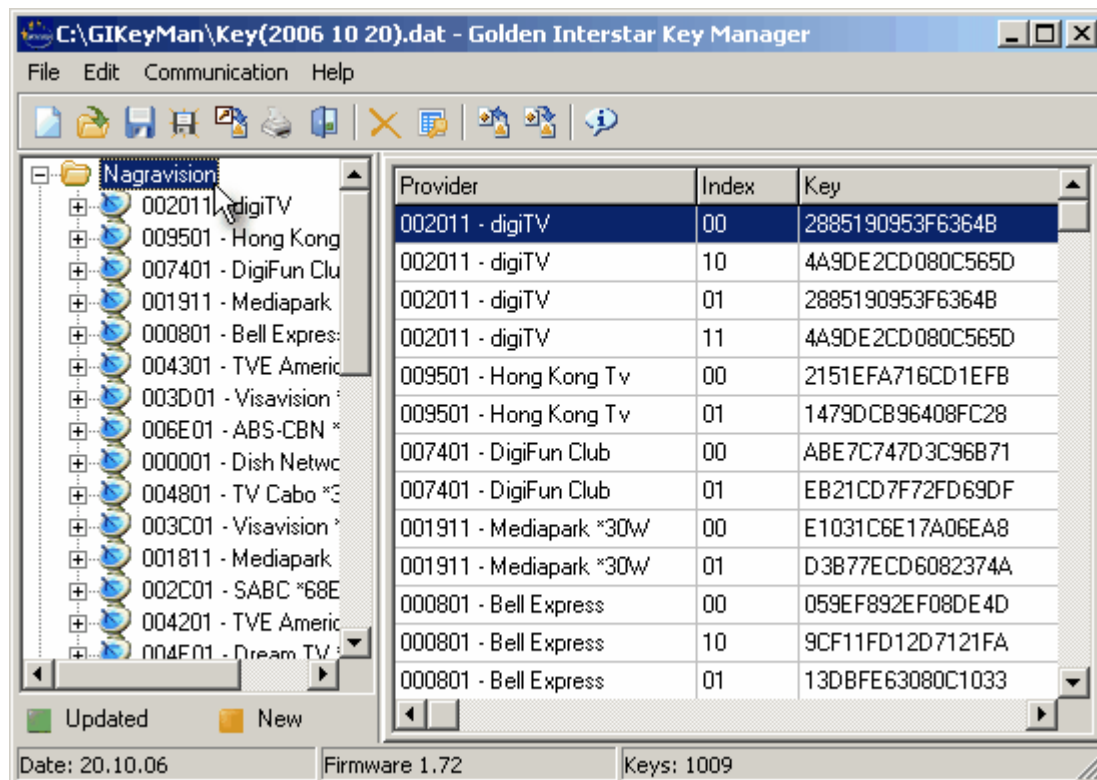

or menu: File / Open

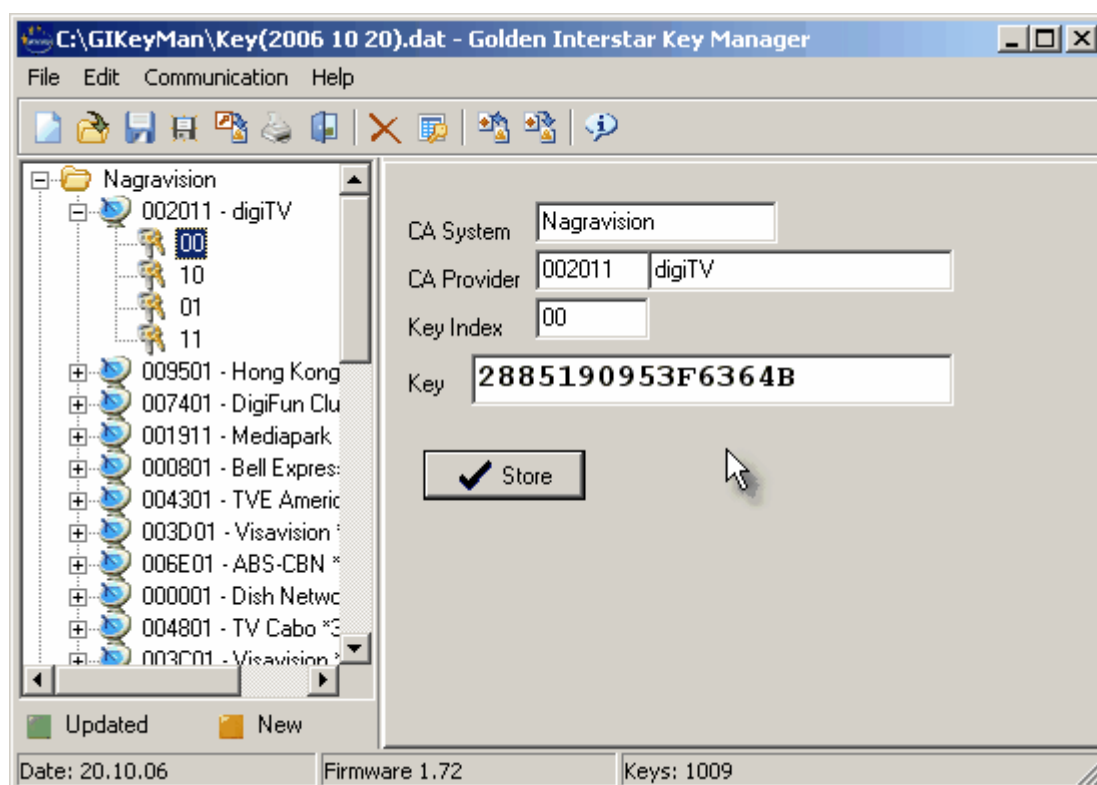

After opening file, is in left part of window tree structure of the key file.

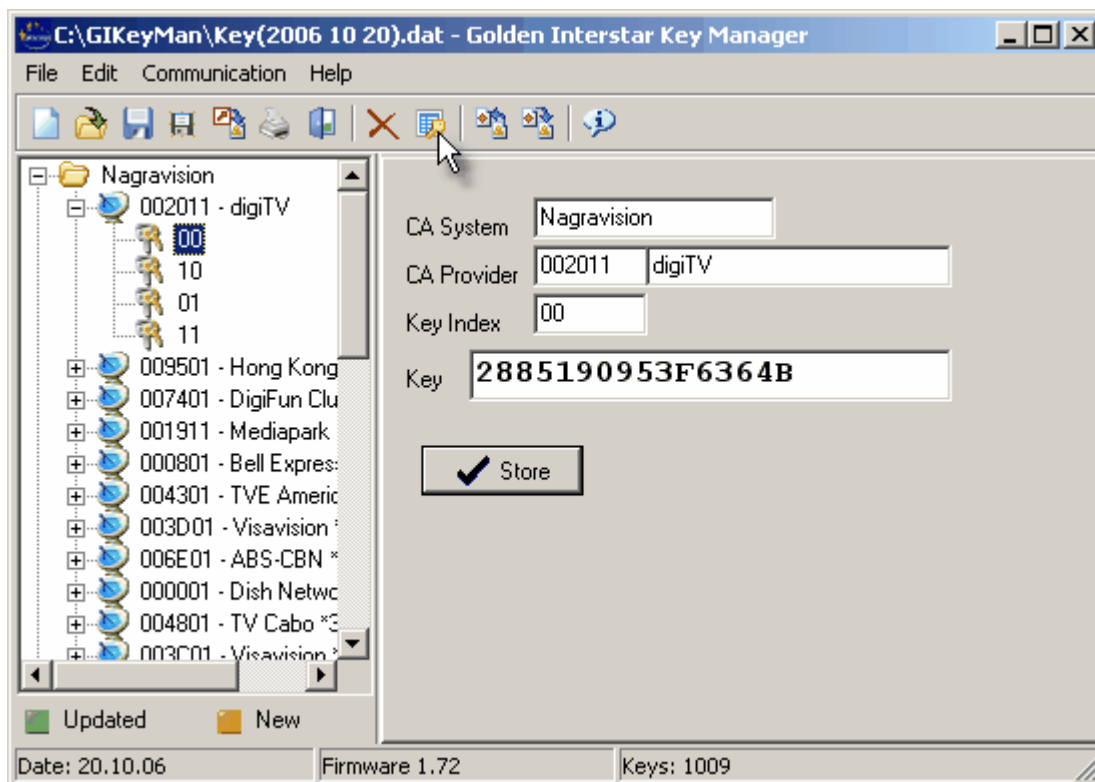

When you select a some node from the tree, the right part of the window, show table view of contained keys or, in case that you select a single key, simple key editor.

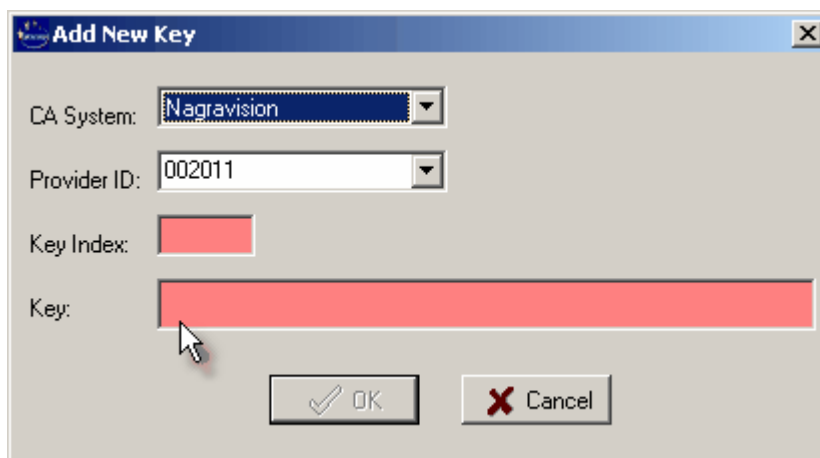

Here you may modify key data.

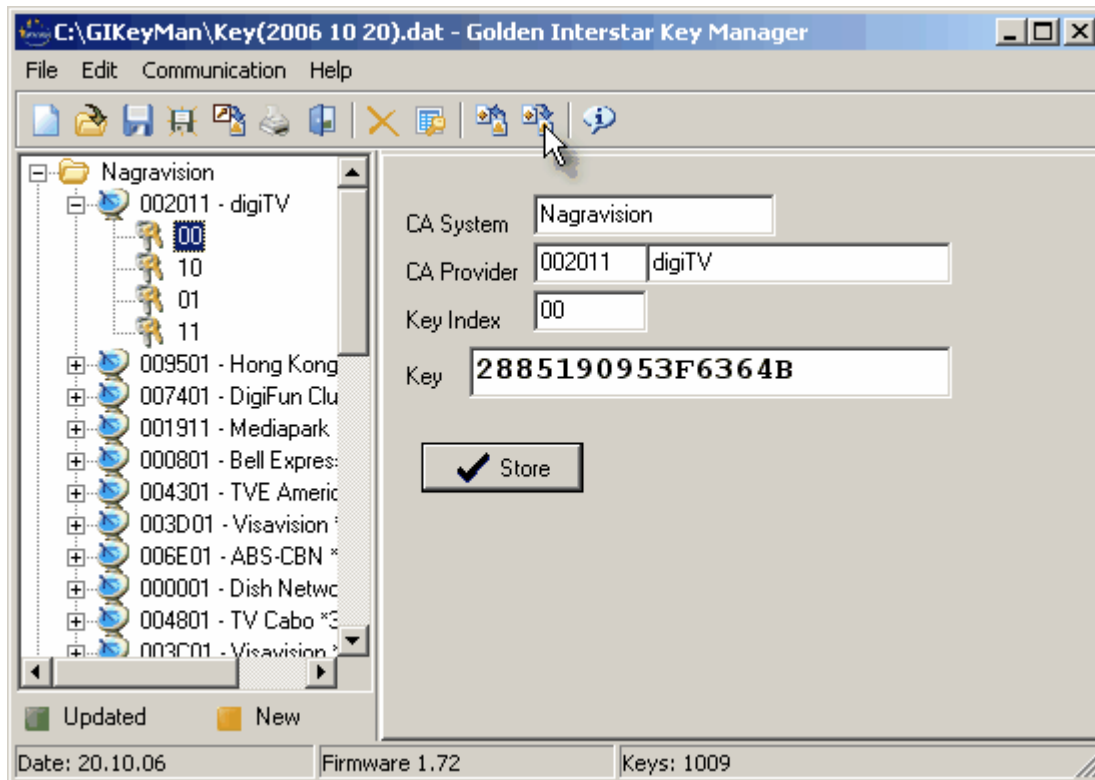

You may also add a new key by click on the “new key” icon

In the dialog window you write the needed data. You may write also a 16 byte key (program split it into needed two parts automatically). The reddish background signalizes wrong entry.

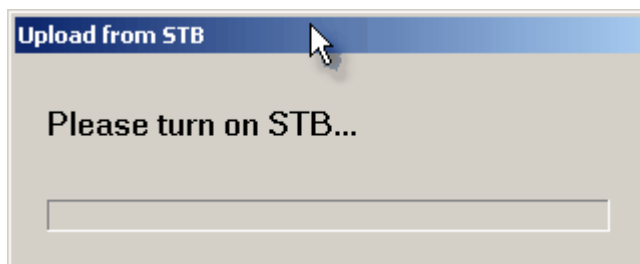

After making all updates you may save changes into a file for upload by a STBDownload program or send it to a STB by a “Download to STB” button.

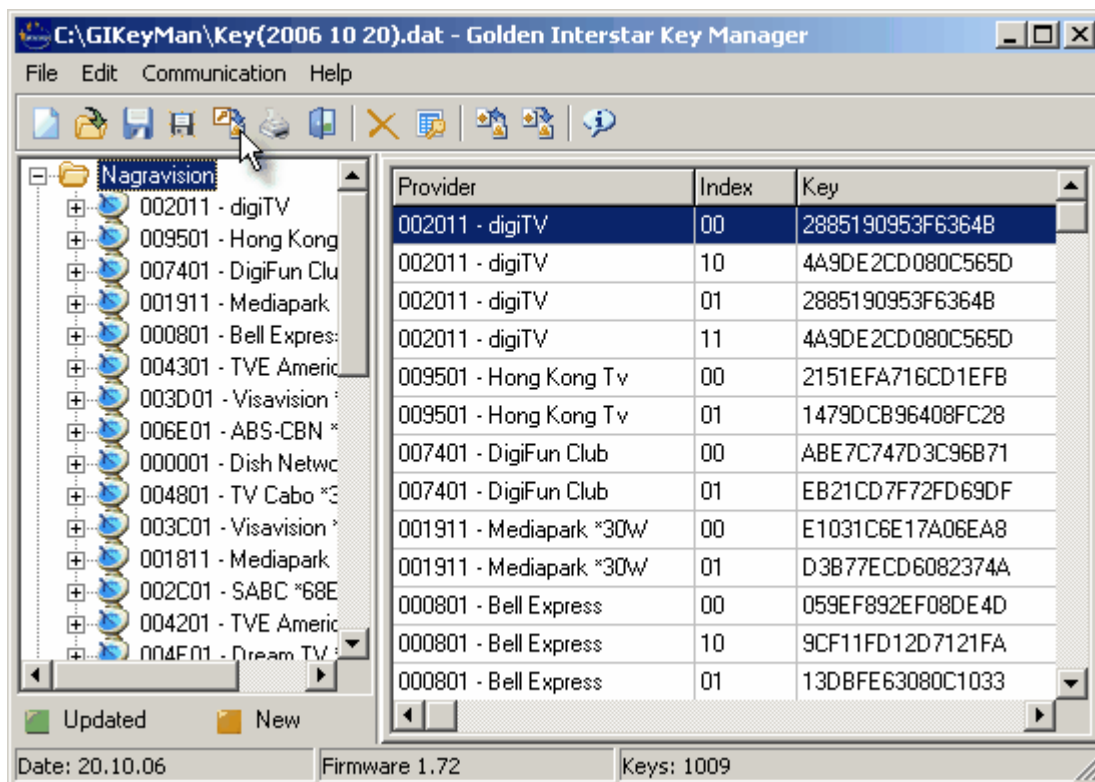

Upload and download process are almost same as in STBDownload program.

- Turn off the STB
- Select upload or Download in program
- Turn on the STB

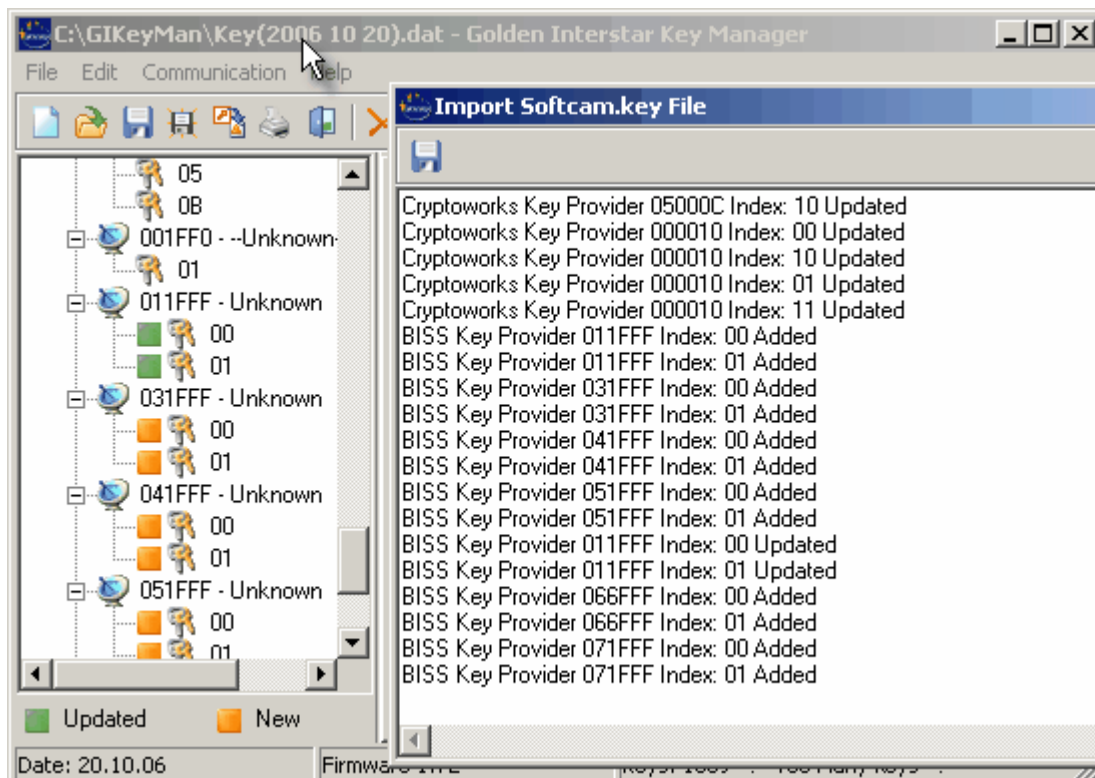

One of the program functions is a import of SoftCam.key file.

After selecting wanted SoftCam file, program give a question, how process a Autoroll keys and do import.

After import program show a log file with description of changes what makes and show changes in the tree.

Plans to do:

- Improve and debug serial communication functions
- Make multilingual interface (selection of program language)
- Make wider selection of com Ports in setup.

If you have any question about this program, suggestions for improve and etc. do not hesitate to contact me by e-mail: martin.frohlich@seznam.cz (English, Czech or Slovak language please).
